RE: Engineering Services
Bluestein Park Elevated Water Tank
TEAM Proposal No. 10-090P

Mr. Ajayi:

TEAM Consultants was recently contracted by the City of Hallandale to perform engineering and inspection services on the City's elevated water tanks (EWT's). Our original proposal was for specifications for repair and repainting of the tanks. During our initial inspection of the Bluestein Tank, City personnel requested that our specifications include the engineering drawings to change the inlet pipe routing at the Bluestein Park EWT. Due to the vertical run and water loading on that pipe, we will need perform detailed engineering and design on that new pipe section. If not installed correctly, that pipe could fail, and possibly damage the tank. That type of engineering is not included in a typical tank repair, and was not budgeted in our proposal. Before we can perform the engineering required on that piping, we will need approval for additional fees. The proposed fee is listed below.

FEE SCHEDULE

Engineering to Re-Route Inlet Pipe at Bluestein Park EWT **$2,000.00**

We appreciate the opportunity of furnishing this quotation and are looking forward to working with you on this project. Should you have any questions regarding this quotation, please do not hesitate to call us.

Sincerely,
Tank Engineering And Management Consultants, Inc.
