Project Update Report

Background

The City of Hallandale Beach has decided to continue utilizing City water to the longest extent possible by incorporating provisions to the existing water treatment plant that can accommodate higher salinity raw water. As a precaution to safeguard against future potential intrusion of saltwater into the City's wellfield, the City will install one reverse osmosis (RO) skid within the existing membrane treatment facility, capable of treating potentially increasing saline raw water.

Scope of Work

The scope of work for this project includes, but is not limited to drilling, developing and testing the Biscayne Aquifer water supply well designated as "PW-9". Construction of well head structure, pumps, piping, valves, flow meter, electrical and controls.

Progress Report as of November 25, 2020

BID # FY 2019-2020-002 Raw Water Well #9 was released to bid on February 10, 2020. Bid due date was June 09, 2020. The lowest bidder was Florida Design Drilling Corp and was awarded the contract. Construction is expected to commence by January 2021. Scheduled construction duration is 395 days.
