## LS#8 Rehabilitation Project

### Background

The City is currently upgrading major infrastructure as necessary in order to ensure that the needs of increased development intensity are met. Modeling results performed by the City's consultant, Hazen and Sawyer, identified the need for immediate upgrades to one of the City's lift stations (Lift Station 8). Lift stations are essential to City operations, as they function to ensure that wastewater reaches its final treatment destination. Therefore, the City needs to construct Lift Station #8 as soon as possible in order to meet the upcoming development demand.

### Scope of Work

The scope of work for this project includes, but is not limited to the demolition of the existing pump station #8 and the construction of new triplex pump station. Proposed approximately 26 LF of 18" Gravity PVC Sewer Main, approximately 64 LF of 10" DIP Forcemain.

The work is located within portions of the right-of-way of the project area as defined by location at the corner of SE 5 Street and SE 4 Avenue., in the City of Hallandale Beach, Florida.

### Project Limits
